

LIGAMENTOTAXOR

Clinical case, Prof. Ph. Liverneaux

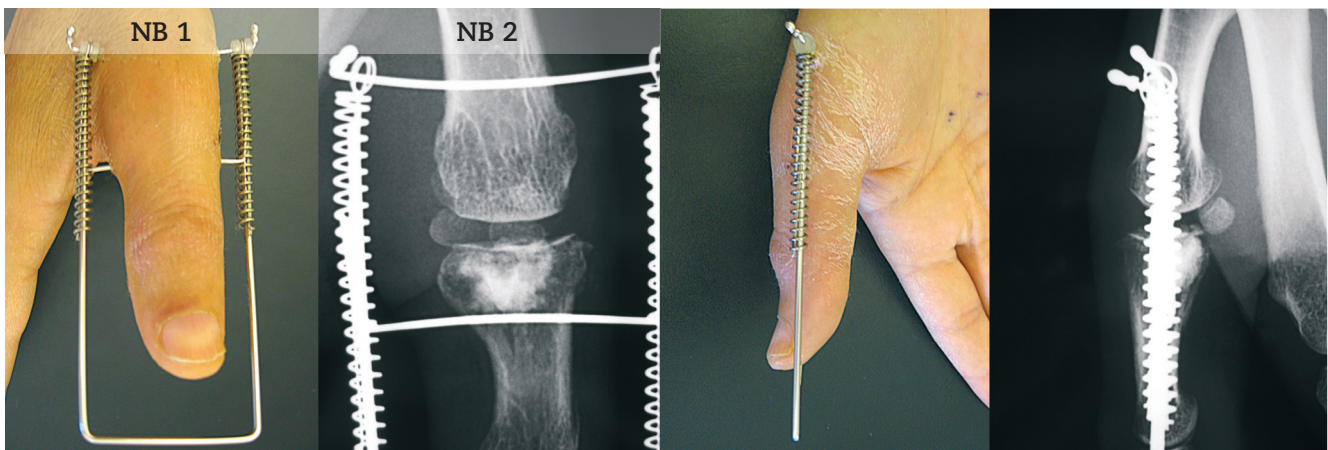

SOS MAIN Strasbourg Hôpitaux Universitaires, France

Male - 47 years

Fracture at base of first phalanx of thumb, right hand.

D0: Application of LIGAMENTOTAXOR. [1] & [2] percutaneous procedure throughout.

NB 1: 1.5 mm Ø Kwire will be bent "U" shape in order to realise a stabilizing frame.

NB 2: MP joint is under strong tension, Kwires and springs are curved.

Post operative

D1 The patient is able to use his hand and even write:

D30 Removal of splint.

<http://www.arem.fr/QRc.php?c=83>

At 5 months, excellent results:

- No pain.
- Mobility and strength identical to contralateral hand.
